RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 20 pages. Original publisher: Golden, Colo. : National Renewable Energy Laboratory, 2006 OCLC Number: (OCOlc)173666150 Subject: Photovoltaic cells -- Research. Excerpt: . . . liquid deposit smooth larger area solar cells and to improve the overall power efficiency of these inexpensive devices are now being developed under an NSF STTR Phase I grant. Lifetime Properties of Device Structures Lifetime behavior of all three types of devices (polymer blends, TiO_x layers, and PCBM blends) was monitored for changes in their IV-curves and quantum efficiency upon exposure to solar radiation. The blended devices were observed to degrade the fastest (typically 30 days), with PCBM blends being the most unstable, while the TiO_x layers were stable for the duration of the test (80 days). The rapid degradation of the blends appeared to be caused by UV-PEDOT PCBM: Thio Al induced damage to the PEDOT-PSS and PPV polymers that was mitigated by including TiO_x in the device structure. The rapid degradation of the PCBM blend devices were also observed for devices kept in a dark dry nitrogen atmosphere. The significantly short shelf life (7 days...)

Reviews

This published book is wonderful. It is really simplified but unexpected situations within the fifty percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- Dr. Janis Reilly

Very helpful to all category of individuals. It is definitely simplified but surprises inside the 50 percent of your pdf. I am very happy to inform you that this is actually the very best pdf i have read in my very own lifestyle and may be the finest pdf for actually.

-- Christelle Treutel
